

# Floor Safe Instructions

- You have 30 seconds for each attempt at opening the safe. If you fail to open the safe in 30 seconds you will need to wait 60 seconds before the next attempt - the safe seems to be resetting itself.
- The two woven ropes around the numbered keys and the numbered keys themselves may not be moved - the safe locks itself down when the ropes or numbers are moved.
- All the numbered keys inside both keypads must be touched in sequential order starting with the number ones.
- Numbered keys must be touched by hand or foot (it doesn't seem to matter) and each numbered key may only be touched once.
- The two numbered keypads appear to be weight sensitive. Only one person can touch the surface inside each keypad at a time. In other words, it's okay for two people to be touching inside the keypads - one person in each pad.
